Technical SEO blueprint for alveos.mx (neumólogo CDMX)

Ship a multi-page static site — not a single-page SPA — with Physician + FAQPage schema, COFEPRIS-compliant credentials block, and a paid-search campaign that owns brand + high-intent local queries. That is the single highest-ROI move. Every other recommendation in this report assumes you will split `alveos.mx` into ~10–12 static `.html` files under subfolders (`/enfermedades/asma/`, `/servicios/espirometria/`, etc.) instead of relying on anchor-based navigation. Google does not index `#servicios` as a separate URL, so an SPA structure caps organic ranking at 3–5 head terms and loses directly to competitors like neumologiacdmx.com.mx, drelizavaleta.com, and neumologocdmx.com.mx who each publish 20–40 indexable URLs. Keep GSAP and GitHub Pages; just emit more HTML files from the same toolchain. The remaining content is developer-ready: copy the code blocks directly into the repo.

---

1. Technical foundation: `<head>`, schema, GitHub Pages, SPA handling

1.1 Canonical `<head>` block for every page

Use `lang="es-MX"` (BCP-47), `og:locale="es_MX"` (Facebook spec), and an absolute HTTPS canonical pointing at the clean path without fragments. Title 50–60 chars; description 140–160 chars. Google rewrites ~62–76% of titles/descriptions, SEO Vendor so front-load the primary keyword and treat the description as a CTR asset, not a ranking signal.

1.2 The one JSON-LD `@graph` block that does everything

Place immediately before `</head>` on the homepage. On condition pages, keep only the `Physician`, `MedicalClinic`, the specific `MedicalCondition`, and a `MedicalWebPage` referencing them via `@id`. Validate with Google's Rich Results Test and `validator.schema.org` Halcy after every deploy. eSEOspace

```

FAQPage caveat: since Google's August 2023 policy, FAQ rich results are restricted to "well-known, authoritative government and health websites." Google Halcy Individual physicians may still qualify, and even without the star-rated snippet, FAQPage schema continues to feed AI Overviews, voice search, and Perplexity/ChatGPT citations Epic Notion — so ship it anyway. Avoid `AggregateRating` on the `Physician`/`LocalBusiness` root (Google's self-serving-review rule makes those stars ineligible); instead attach `AggregateRating` to individual `Service` pages like `/servicios/espirometria` where review snippets are still valid.

1.3 SPA indexability: don't fight Google, just add HTML files

Google has never indexed URL fragments as separate pages, and `#!` hashbang support was removed in 2015. An `#servicios` section will only ever appear as an algorithmic "jump-to" sitelink, never as an independent ranking URL. **The fix is not a framework migration** — keep GSAP, keep your build — just emit more files:

```
alveos.mx/                                  → Hub (brand + overview)
alveos.mx/sobre-el-doctor/
alveos.mx/enfermedades/asma/
alveos.mx/enfermedades/epoc/
alveos.mx/enfermedades/apnea-del-sueno/
alveos.mx/enfermedades/neumonia/
alveos.mx/enfermedades/bronquitis-cronica/
alveos.mx/servicios/espirometria/
alveos.mx/servicios/polisomnografia/
alveos.mx/servicios/teleconsulta/
alveos.mx/seguros/
alveos.mx/preguntas-frecuentes/
alveos.mx/agendar-cita/
alveos.mx/contacto/
alveos.mx/aviso-de-privacidad/
alveos.mx/aviso-legal-cofepris/
```

Within each page, add a visible table of contents with `<a href="#seccion">` anchors so Google may promote them as jump-to sitelinks. **Do not use `history.pushState` to fake clean URLs like `/servicios`** — GitHub Pages has no server-side routing and a refresh on that path returns 404.

1.4 GitHub Pages: custom domain, HTTPS, and what you cannot do

Custom domain `alveos.mx` requires a `CNAME` file at repo root containing `alveos.mx`, GitHub plus these DNS records at your registrar:

```
A     @   185.199.108.153
A     @   185.199.109.153
A     @   185.199.110.153
A     @   185.199.111.153
AAAA  @   2606:50c0:8000::153  (+ .8001, .8002, .8003)
CNAME www <username>.github.io.
```

In Settings → Pages, enter `alveos.mx` as the custom domain, verify it, and enable **Enforce HTTPS** (Let's Encrypt provisions within 24 h; GitHub if you have any CAA records, at least one must allow `letsencrypt.org`). GitHub GitHub automatically 301-redirects `www.alveos.mx` → apex. GitHub You **cannot** set `Strict-Transport-Security`, `Content-Security-Policy`, custom `Cache-Control`, or server-side redirects. Workarounds:

Limitation	Workaround
No custom headers	`<meta http-equiv="content-security-policy">` for CSP; accept loss of HSTS (HTTPS enforcement still 301s at the edge)
No server-side redirects	Physical folder paths (`/asma/index.html`); `<meta http-equiv="refresh">` only as a last resort
Fixed 10-min cache on HTML, no Brotli	Put Cloudflare in front (proxied CNAME, SSL mode "Full"): unlocks Brotli, HTTP/3, custom cache rules, and long-tail CDN PoPs for LatAm — **strongly recommended**
No cache-control on assets	Version filenames (`main.css?v=a1b2c3d`) via a GitHub Action that injects `${GITHUB_SHA:0:7}` into HTML before deploy

Committed files to ship day 1: `CNAME`, `.nojekyll`, `robots.txt`, `sitemap.xml`, `404.html`, `llms.txt`.

```xml
```

```xml
<!-- sitemap.xml — include clean URLs ONLY, never #anchors -->
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
  <url><loc>https://alveos.mx/</loc><lastmod>2026-04-22</lastmod><priority>1.0</prio
  <url><loc>https://alveos.mx/enfermedades/asma/</loc><priority>0.8</priority></url>
  <url><loc>https://alveos.mx/enfermedades/epoc/</loc><priority>0.8</priority></url>
  <url><loc>https://alveos.mx/enfermedades/apnea-del-sueno/</loc><priority>0.8</prio
  <url><loc>https://alveos.mx/servicios/espirometria/</loc><priority>0.7</priority><
  <url><loc>https://alveos.mx/preguntas-frecuentes/</loc><priority>0.7</priority></u
</urlset>
```

```
# robots.txt — explicitly allow AI crawlers (citations > hoarding)

```

1.5 Progressive enhancement: GSAP without hiding content from Google

Never set `opacity:0` or `visibility:hidden` in CSS on content-bearing elements. Googlebot renders JS but treats CSS-hidden content as downweighted, and `opacity:0` disqualifies the hero from being the LCP candidate. Use a `.js` class added by an inline script in `<head>`, and animate with `gsap.from()` so the DOM's resting state is the visible final state.

```html
```

```
<script>document.documentElement.classList.add('js');</script>
<style>
  .reveal, .reveal-up, .reveal-fade { opacity: 1; transform: none; }
  @media (prefers-reduced-motion: no-preference) {
    .js .reveal-up:not(.is-visible) { opacity: 0; transform: translate3d(0,24px,0);
    .js .reveal-fade:not(.is-visible) { opacity: 0; will-change: opacity; }
  }
</style>
<noscript><style>.reveal,.reveal-up,.reveal-fade{opacity:1!important;transform:none!
```

```js
if (window.gsap && window.ScrollTrigger) {
  gsap.registerPlugin(ScrollTrigger);
  const mm = gsap.matchMedia();
  mm.add('(prefers-reduced-motion: no-preference)', () => {
    ScrollTrigger.batch('.reveal-up', {
      onEnter: batch => gsap.from(batch, { autoAlpha: 0, y: 24, stagger: 0.08, durat
      start: 'top 85%', once: true
    });
  });
  mm.add('(prefers-reduced-motion: reduce)', () => {
    document.querySelectorAll('.reveal-up,.reveal-fade').forEach(el => el.classList.
  });
} else {
  document.querySelectorAll('.reveal-up,.reveal-fade').forEach(el => el.classList.ad
}
```

Verify by opening DevTools → Network → disable JavaScript → reload: every `<h1>`, `<h2>`, paragraph, and contact block must stay fully readable. Then in Search Console → URL Paperblog Inspection → **View crawled page**, confirm Googlebot's rendered DOM matches.

---

2. Core Web Vitals on a GSAP + GitHub Pages stack

Targets unchanged for 2026: **LCP < 2.5 s, INP < 200 ms,** NitroPack **CLS < 0.1**. INP replaced FID in March 2024 and is the most-failed metric industry-wide. A static HTML site on GitHub Pages fronted by Cloudflare has a structural advantage here; the only thing that breaks it is GSAP misused on the hero.

2.1 LCP: never animate the LCP element from opacity 0

Chrome's LCP algorithm **skips any element with** `opacity: 0`, so a fading-in hero headline registers the first visible paint as LCP — often 2–3 s later than necessary. One documented case study moved from 5.3 s → 2.4 s by starting the hero at `opacity: 0.01` instead of 0. Three acceptable patterns:

- **Don't animate the LCP element.** Animate its sibling (subheading, CTA, accent line). Simplest.
- **Start at** `opacity: 0.01` in CSS, animate to 1 with `gsap.to()`. Visually identical; LCP fires on first paint.
- **Transform-only animation** (`translateY`, `scale`). Transforms don't affect visibility per Chrome's LCP definition.

Preload the hero image and the two critical fonts (crossorigin is **required** on font preload or the browser silently ignores it). Preload more than 1–2 fonts and you contend with the LCP resource for bandwidth.

```html
<link rel="preload" as="image"
      href="/img/hero-doctor-1280.avif"
      imagesrcset="/img/hero-doctor-640.avif 640w, /img/hero-doctor-960.avif 960w, /
      imagesizes="(max-width: 768px) 100vw, 60vw"
      type="image/avif" fetchpriority="high">
<link rel="preload" href="/fonts/inter-v13-latin-regular.woff2" as="font" type="font
<link rel="preload" href="/fonts/inter-v13-latin-600.woff2" as="font" type="font/wof
```

```html
<picture>
  <source type="image/avif" srcset="/img/hero-doctor-640.avif 640w, /img/hero-doctor
  <source type="image/webp" srcset="/img/hero-doctor-640.webp 640w, /img/hero-doctor
  <img src="/img/hero-doctor-960.jpg" alt="Dr. William Lara Vázquez, neumólogo en CD
       width="1280" height="853" fetchpriority="high" decoding="async">
</picture>
```

Never use `background-image` for the LCP element — the preload scanner can't discover it. Keep the hero image under 200 KB with AVIF + WebP fallback.

2.2 INP: passive listeners, batched ScrollTrigger, yield on long tasks

Every non-`preventDefault` scroll/touch/wheel listener must be `{passive: true}`. ScrollTrigger's own wheel listener is not passive (GSAP issue #460) but you don't control that — just don't wrap your own non-passive listener around it. Use `ScrollTrigger.batch` with `once: true` to free memory on long pages; debounce `resize` with `ScrollTrigger.refresh()` at 250 ms; avoid `scrub: true` on long timelines (use `scrub: 0.5` if necessary). For heavy click handlers, paint feedback first, then yield:

```js
const yieldToMain = () => globalThis.scheduler?.yield ? scheduler.yield() : new Prom

btn.addEventListener('click', async () => {
  updateUI();              // immediate visual feedback
  await yieldToMain();
  validate();
  await yieldToMain();
  format();
  ('requestIdleCallback' in window ? requestIdleCallback : setTimeout)(sendAnalytics
});
```

Load GSAP with `defer` (never `async` — ordering matters). Lazy-load heavy plugins (Flip, MotionPath) via `IntersectionObserver` when the user is 400 px from the section that needs them. For simple reveal animations consider native CSS `animation-timeline: view()` — it runs on the compositor thread and costs zero INP; GSAP only for hero intro + complex interactions.

2.3 CLS: explicit dimensions, metric-matched fallback font, pre-sized iframes

Every `<img>` needs `width` and `height` attributes even when CSS makes it responsive. Iframes (Google Maps) must sit inside a container with a reserved `aspect-ratio`. Web-font layout shift is solved with a `@font-face` fallback whose metrics match Inter:

```css
```

```
@font-face {
  font-family: 'Inter Fallback';
  src: local('Arial');
  size-adjust: 107.4%;
  ascent-override: 90%;
  descent-override: 22.4%;
  line-gap-override: 0%;
}
body { font-family: 'Inter', 'Inter Fallback', system-ui, sans-serif; }
```

With that fallback in place, `font-display: swap` produces near-zero CLS. Compute the exact override values for your chosen font at `screenspan.net/fallback` or `capsizecss.com/metrics`.

GSAP's `x`, `y`, `scale`, `rotation`, `autoAlpha` use transforms and opacity only — **these never trigger CLS**. Animating `left`, `marginTop`, `top` does — never use those in GSAP.

2.4 Cloudflare in front of GitHub Pages

Put the domain on Cloudflare's free tier, SSL mode "Full", proxy enabled. Create a Cache Rule: `*.css OR *.js OR *.woff2 OR *.avif OR *.webp` → Edge TTL 1 year, Browser TTL 1 year. Enable Brotli and Early Hints; **disable Rocket Loader** (it breaks GSAP timing). This unlocks ~20% smaller text payloads vs. GitHub's gzip-only and gives you HTTP/3.

---

3. Local SEO: GBP, NAP, directories, keywords

3.1 Google Business Profile configuration

Primary category must be **Neumólogo** (the exact GBP Spanish category string used in Mexico; "Pulmonólogo" is colloquial and "Médico especialista" is too generic). Secondary categories up to nine, chosen from what Dr. Lara actually does: `Médico`, `Especialista en medicina del sueño`, `Especialista en medicina interna` (if applicable). Keep it as a **storefront** listing — consultorio 507 inside Saturnino Herrán 59 qualifies as long as there's a nameplate on the door and a lobby directory entry. Enable all honest attributes (wheelchair accessible, LGBTQ+ friendly, appointments required, new patients: yes, English spoken, online bookings) because they add relevance facets without downside. Upload 20+ real photos at launch — exterior with street number visible, lobby directory, suite 507 door, waiting room, spirometer, diplomas, Dr. Lara in white coat — and add 2 per month. Seed 10–15 Q&As from a personal Google account and answer from the business account.

Post 2–4 times per week (GBP posts expire in 7 days, so consistency beats volume). Tie the "Reserva" button to Doctoralia's native GBP integration (Plus/VIP plan) or to WhatsApp Click-to-Chat `https://wa.me/525591708334` as a post CTA. Link GBP to Google Ads to unlock location assets.

3.2 NAP canonical format (use verbatim everywhere)

```
Name:    Dr. William César Lara Vázquez
Address: Saturnino Herrán 59, Consultorio 507,
         Col. San José Insurgentes, Benito Juárez,
         03900 Ciudad de México, CDMX
Phone:   +52 55 9170 8334
Web:     https://alveos.mx
```

Include the "Dr." prefix — standard in Mexican professional usage and not penalized for medical categories. **Do not add "Neumólogo" to the GBP business name** — that violates Google's naming guidelines and can trigger suspension; express the specialty through the primary category, description, and services list instead. Use `+52 55 9170 8334` for international/schema contexts and `55 9170 8334` for domestic display; always `tel:+525591708334` (no spaces) for click-to-call.

3.3 Priority directory submissions

Work the list in this order: **Doctoralia.com.mx (critical — dominates SERPs), Top Doctors MX (invitation-based, nominate yourself with CV), Doctoranytime.mx, SMNyCT members directory (smnyct.org.mx), Consejo Nacional de Neumología, Medica.mx, MyDoc.mx, and the cuadros médicos of insurers Dr. Lara accepts (GNP, AXA, MetLife, Sofía, Mapfre, BBVA Seguros, Plan Seguro, Banorte).** Doctoralia and Top Doctors outbound website links are typically `nofollow`/`ugc` — their value is referral traffic and NAP citation, not PageRank. If the doctor did residency at INER, get on the INER alumni page; if teaching at UNAM/Anáhuac, add the faculty profile. Each of these citations reinforces the entity in Google's knowledge graph more than any on-site optimization.

3.4 Keyword map (CDMX pulmonology)

Mexican search volumes are suppressed for hyper-local queries in Keyword Planner; the estimates below are directional based on SERP depth and ad coverage. Validate inside Google Ads Keyword Planner after account creation.

Tier	Keyword cluster	Est. MX vol/mo	Destination
Head / BOFU	neumólogo CDMX · neumólogo Ciudad de México · neumólogo particular CDMX · neumólogo cerca de mí	800–1,300 · 500–900 · 150–300 · 500–1,500	Homepage H1/H2
MOFU→BOFU	mejor neumólogo CDMX · neumólogo recomendado CDMX · neumólogo Doctoralia	200–400	/sobre-el-doctor
Geo long-tail	neumólogo Benito Juárez · neumólogo Insurgentes Sur · neumólogo San José Insurgentes · neumólogo Del Valle · neumólogo Nápoles · neumólogo Roma	10–150 ea.	Geo section on /contacto
Condition BOFU	especialista en asma CDMX · tratamiento EPOC Ciudad de México · especialista apnea del sueño CDMX · covid prolongado neumólogo CDMX	100–600 ea.	/enfermedades/{slug}
Procedure	espirometría CDMX · polisomnografía CDMX · estudio del sueño CDMX · broncoscopía CDMX	100–900 ea.	/servicios/{slug}
Insurance	neumólogo que acepta GNP · neumólogo AXA CDMX · neumólogo con seguro	low, **very high CVR**	/seguros
Informational TOFU	síntomas de EPOC · qué es la apnea del sueño · tratamiento para asma en adultos · cómo dejar de fumar	700–8,100 ea.	Blog

Direct competitor flag: `neumologoencdmx.com.mx` (Salud Respiratoria Mx, Dr. Edgar Castro) operates in the **same building** at Saturnino Herrán 59 and has an exact-match domain. Differentiate Alveos through review volume, content depth (FAQ + condition pillars), and Doctoralia Plus visibility. Other strong individual-doctor competitors to study: `drelizavaleta.com`, `drmenchacaneumologo.com` (250+ reviews), `neumologiacdmx.com.mx` (40+ URLs), `dr-stanley.com`.

3.5 Embedding Google reviews and the schema-stars trap

Google's 2019 self-serving-review policy makes `AggregateRating` on a

`Physician`/`LocalBusiness` **ineligible for star snippets** — adding it doesn't hurt, but it won't produce stars. What DOES produce stars: `Service` or `Product` schema on service pages with `AggregateRating` + visible individual reviews matching the count. So `/servicios/espirometria/` can legitimately show stars in Google for "espirometría CDMX" if you publish 5–10 real reviews on that page with written patient consent.

For dynamic display of current Google reviews on the homepage, use the **Google Places API (New)** — 10,000 free requests/month on the Essentials tier, hard cap of **5 "most relevant" reviews** per call. Required attribution: author name, Google profile link, author photo; do not edit review text. Widget alternatives (Elfsight, Featurable, Trustmary) render reviews from a third-party iframe/CDN so Googlebot does not attribute the content to alveos.mx — fine for social proof, zero SEO value.

COFEPRIS constraint on testimonials (critical). Testimonios en owned media require the higher-tier **Permiso de Publicidad** which only `persona moral` (clinics) file. For Dr. Lara as `persona física` with the free Aviso, the safe pattern is: display **aggregate rating + link to source** ("Ver las 120 reseñas en Doctoralia"), never paste individual patient testimonials into the site. Reviews live on third-party platforms; Alveos just links out.

---

4. Google Ads + SEO synergy

4.1 Why run both — and the regulatory path in Mexico

Google's Incremental Ad Click study shows that when you own organic #1, pausing ads loses only ~50% of clicks; for position >4, pausing loses 96%. For a new static site that won't rank #1 for "neumólogo CDMX" for 6–12 months, Google Ads fills the gap and drives months 1–6 traffic. AI Overviews have cut organic CTR ~61% and paid CTR ~68% on informational queries — but brands that appear **in** the AIO get CTR lifts (organic 0.74%→1.02%, paid 7.89%→11%), which is a second reason to invest in AEO-optimized content as well as ads.

Regulatory path for Dr. Lara (individual physician): the free **Aviso de Publicidad COFEPRIS Modalidad A** (trámite COFEPRIS-02-002, submitted via DIGIPRiS ⩾5 days before launch) is sufficient. The paid Permiso (~$28,000 MXN) applies only to clinics/groups. No LegitScript certification is required — it only applies to online pharmacies, telemedicine platforms dispensing Rx, and addiction services.

4.2 Landing page quality score for medical YMYL

Quality Score's Landing Page Experience factor directly consumes Core Web Vitals; industry data shows Below Average LPE raises CPC 25–50% while Above Average reduces CPC 15–30%, with real-world A/B tests confirming 20–25% CPC reductions from CWV-only improvements. QS 10 costs ~50% less per click than QS 5 for the same position. A static HTML site on GitHub Pages

hitting LCP < 2.5 s / INP < 200 ms / CLS < 0.1 has a structural Ad Rank advantage over WordPress/React competitors.

Trust signals Google's reviewers expect on a Mexican medical landing page — all must be **visible**, not buried in PDFs:

1. Dr. William César Lara Vázquez, Neumólogo — above the fold
2. Cédula profesional (médico cirujano) with SEP verification link
3. Cédula de especialidad en Neumología with SEP verification link
4. Institución del título (BUAP) and de la especialidad (UNAM/INER)
5. Certificación vigente del Consejo Nacional de Neumología
6. Aviso de Publicidad COFEPRIS folio number
7. Complete NAP + Google Map embed + business hours
8. Aviso de Privacidad + Términos y Condiciones links in global footer
9. Medical disclaimer ("La información no sustituye consulta presencial…")
10. Author bio page with photo, hospital affiliations, SMNyCT membership, publications
11. HTTPS enforced
12. Physician + MedicalWebPage schema with `lastReviewed` dates

4.3 Paid vs. organic split

Push these to Ads (high commercial intent, low informational value): `neumólogo CDMX`, `neumólogo particular CDMX`, `neumólogo urgencia CDMX`, `agendar cita neumólogo CDMX`, `neumólogo cerca de mí`, `mejor neumólogo CDMX`, `especialista en apnea del sueño CDMX`, `espirometría CDMX precio`, brand terms (Alveos, Dr. Lara Vázquez — defensive bid).

Leave these to organic content (AI Overviews eat informational paid anyway): `síntomas de EPOC`, `qué es la apnea del sueño`, `diferencia neumólogo y neumonólogo`, `cómo dejar de fumar`, `cuánto dura la neumonía`, `oxímetro valores normales`.

Mandatory negative keyword list (add day 1): `empleo, vacante, sueldo, curso, diplomado, residencia médica, examen enarm, universidad, libro, pdf, consulta gratis, imss, issste, insabi, pediátrico, pediatra, niños, veterinario, perro, gato, wikipedia, youtube, memes, foto, caricatura, symbicort, spiriva, ventolin, salbutamol, salmeterol, montelukast, budesonida`. The drug brand names prevent policy flags if those search terms trigger an ad.

4.4 Ad copy rules under COFEPRIS + Google Healthcare policy

Prohibited in Spanish-language copy: superlatives without proof ("el mejor"), cure guarantees

("curación 100%", "garantizado", "sin riesgo"), Rx drug brand names, testimonials that imply specific outcomes, unproven treatments (stem cell for lung disease). Allowed: factual years of experience, "Certificado por el Consejo Nacional de Neumología", cédula numbers, services offered, bilingual attention. Sample RSA headlines for the core "neumólogo CDMX" ad group: *Neumólogo Certificado en CDMX · Dr. Lara Vázquez — Neumólogo · Consulta de Neumología CDMX · Especialista en EPOC y Asma · Apnea del Sueño: Diagnóstico · Agenda tu Cita · Consulta Presencial o en Línea · Consejo Mexicano de Neumología*.

4.5 Ad assets (extensions)

Call asset (account-level, tied to business hours, Google Forwarding Numbers **are** available in Mexico — free native call tracking), location asset (link GBP), 4–6 sitelinks pointing to `/enfermedades/asma/`, `/enfermedades/epoc/`, `/enfermedades/apnea-del-sueno/`, `/contacto/`, `/agendar-cita/` (sitelinks work best with real URLs, not SPA `#` anchors — another reason to ship multi-page), 8–10 callouts ("Cédula profesional [núm]", "Telemedicina disponible", "Aceptamos principales aseguradoras"), structured snippets for Services and Types, image assets with real photos of Dr. Lara and consultorio. **Avoid price assets for consultations** (COFEPRIS scrutinizes price claims and it commoditizes); use them only for ancillary procedures. Lead form assets require an LFPDPPP-compliant Aviso de Privacidad link and minimum fields.

4.6 Measurement on static HTML

Deploy GTM (single container in `<head>` + `<noscript>` in `<body>` of every HTML file, loaded lazily on first interaction or at 3.5 s timeout to protect LCP). Conversions to configure in Google Ads: call from ads (min 60 s), call from website via DNI, click-to-call on `tel:` links, form submit, WhatsApp click to `wa.me/525591708334`, "Agendar cita" click. Enable **Enhanced Conversions for Leads** via GTM — Google reports ~17% average conversion lift; GTM hashes email/phone/name client-side. For WhatsApp attribution, append gclid to the prefilled message: `https://wa.me/525591708334?text=Hola%20vengo%20de%20Google`. CallRail doesn't do Mexican numbers natively — stick with Google's native Call Reporting (free), or upgrade to CallTrackingMetrics/Nimbata only if multiple campaign-specific numbers become necessary.

Realistic expectation at MX$10,000–15,000/month across brand + core + condition + remarketing campaigns: **15–40 qualified calls/form fills per month, CPA MX$150–400**, with Ads generating 60–70% of first-visit traffic in months 1–6 and SEO ramping thereafter.

---

5. YMYL and E-E-A-T compliance (Mexico)

5.1 COFEPRIS: what's legally required on alveos.mx

Article 83 of the Ley General de Salud (reformada 01-sept-2011) and art. 19 of the Reglamento de

Publicidad require that every piece of medical advertising — including the website — display:

1. Institución que expidió el título profesional (BUAP)
2. Número de cédula profesional (SEP)
3. Institución de la especialidad (UNAM/INER)
4. Número de cédula de especialidad (SEP)
5. Consejo certificador vigente (Consejo Nacional de Neumología)
6. Número de Aviso de Publicidad COFEPRIS once filed

Prohibited content per arts. 17–18 RLGSMP: fabricated testimonials, before/after photos without consent, "curación garantizada", comparisons with competitors, unproven treatments, patient testimonials implying specific outcomes. Sanctions range $2,000 to ~$2,489,300 MXN.

Action: file the free Aviso de Publicidad Modalidad A on DIGIPRiS five days before launch; requires título, cédulas, comprobante de domicilio, and screenshots of ad copy + landing page. Also file the Aviso de Funcionamiento del consultorio and designate Responsable Sanitario (Dr. Lara himself for a single-physician consultorio) if not already filed.

Copy-paste footer block satisfying art. 83 LGS:

```html
<section id="cumplimiento-cofepris" class="legal-footer">
  <h3>Información Profesional (Art. 83 Ley General de Salud)</h3>
  <p>
    <strong>Dr. William César Lara Vázquez</strong><br>
    Médico Cirujano, Benemérita Universidad Autónoma de Puebla (BUAP).<br>
    Cédula Profesional: <a href="https://www.cedulaprofesional.sep.gob.mx/" target="
    Especialidad en Neumología, Instituto Nacional de Enfermedades Respiratorias (IN
    Cédula de Especialidad: <a href="https://www.cedulaprofesional.sep.gob.mx/" targ
    Certificado vigente por el Consejo Nacional de Neumología y Cirugía de Tórax.<br
    Miembro de la Sociedad Mexicana de Neumología y Cirugía de Tórax (SMNyCT).<br>
    Aviso de Publicidad COFEPRIS No. <strong>XXXXXXXXXXX</strong> (Modalidad A).
  </p>
</section>
```

5.2 LFPDPPP: the 2025 rewrite changes who enforces it

The **new LFPDPPP** published in the DOF on **20 March 2025** abrogated the 2010 law; enforcement moved from INAI (disuelto) to the **Secretaría Anticorrupción y Buen Gobierno**. The Reglamento and Lineamientos del Aviso de Privacidad remain in force where not

contradicted. Article 21 of the new law still mandates the three-tier Aviso de Privacidad structure (integral on `/aviso-de-privacidad/`, simplificado in forms, corto in cookie banners).

Minimum content of the Aviso Integral:

1. Identidad y domicilio del responsable (Dr. Lara + consultorio address + contact email)
2. Datos personales recabados — **distinguir sensibles** (salud, historial clínico) que requieren consentimiento expreso (art. 9)
3. Finalidades — **primarias vs. secundarias** (la ley 2025 refuerza este requisito)
4. Transferencias (aseguradoras, laboratorios, hospitales de referencia)
5. Mecanismos para ejercer derechos ARCO (Acceso, Rectificación, Cancelación, Oposición — plazo 20 días hábiles)
6. Revocación del consentimiento
7. Procedimiento de cambios al aviso
8. Uso de cookies, web beacons y tecnologías similares
9. Fundamento legal (LFPDPPP 2025, NOM-004-SSA3-2012 expediente clínico)

Mexico has no ePrivacy Directive equivalent so a GDPR-style cookie opt-in banner isn't strictly mandatory, but if cookies collect personal data (IP, `_ga`, `_fbp`) the LFPDPPP transparency + consent duties apply — ship a categorized opt-in banner (necesarias/analíticas/marketing) as best practice.

Simplified notice for forms:

```html
<p class="aviso-privacidad-simplificado">
  Sus datos personales son tratados por el Dr. William César Lara Vázquez con fines
  Consulte el <a href="/aviso-de-privacidad/">Aviso de Privacidad Integral</a> y eje
  Al enviar este formulario manifiesta haberlo leído y dar su consentimiento conform
</p>
<label><input type="checkbox" name="consent_sensitive" required>
  Acepto el tratamiento de mis datos personales sensibles (salud).
</label>
```

5.3 E-E-A-T for a YMYL-Health site

Google's Search Quality Evaluator Guidelines (September 2025, 182 pp) treat medical content as the most sensitive YMYL category. Signals Alveos must emit:

- **Experience**: Dr. Lara in short videos discussing patient cases (anonymized per NOM-004-SSA3-2012), first-person voice on condition pages ("En mi consulta veo con frecuencia…").
- **Expertise**: full `/sobre-el-doctor/` page with verifiable cédulas, years of practice, institución (INER), publications, congresses.
- **Authoritativeness**: hospital affiliations with logos, SMNyCT membership, Consejo Nacional de Neumología certification, outbound links to GINA, GOLD, INER, OMS.
- **Trust**: HTTPS, consistent NAP across Doctoralia/GBP/site, medical disclaimer, `/politica-editorial/` describing review cycle, no "cura garantizada" language, dated "Revisado médicamente el…" byline on every clinical page.

```html
<aside class="medical-review-byline" itemprop="reviewedBy" itemscope itemtype="https
  <img src="/assets/dr-lara-thumb.jpg" alt="Dr. William César Lara Vázquez">
  <p><strong>Revisado médicamente por:</strong>
    <a href="/sobre-el-doctor/" itemprop="url"><span itemprop="name">Dr. William Cés
    <span itemprop="jobTitle">Médico Neumólogo</span> — Cédula Profesional
    <span itemprop="identifier">XXXXXXX</span>
    (<a href="https://www.cedulaprofesional.sep.gob.mx/" target="_blank" rel="noopen
    Publicado: <time itemprop="datePublished" datetime="2026-01-15">15 enero 2026</t
    Última revisión: <time itemprop="dateModified" datetime="2026-04-10">10 abril 20
  </p>
</aside>
```

Required pages: `/aviso-de-privacidad/`, `/terminos-y-condiciones/`, `/aviso-legal-cofepris/`, `/politica-editorial/`, `/aviso-de-cookies/`. Standard medical disclaimer, visible on every clinical page:

> La información contenida en este sitio es de carácter educativo, elaborada por el Dr. William César Lara Vázquez, y **no sustituye la consulta, diagnóstico ni tratamiento con un profesional médico**. Ante cualquier síntoma acuda a su médico o al servicio de urgencias. En caso de emergencia respiratoria comuníquese al 911.

---

6. Content and AEO strategy

6.1 Hub-and-spoke, adapted for a static site

The hub (`/`) targets "neumólogo CDMX" and brand queries. Spokes target condition + procedure + insurance queries. Four topical silos connect via contextual internal links: **airway**

obstruction (asma ↔ EPOC ↔ bronquitis crónica ↔ espirometría), **sleep** (apnea ↔ ronquido ↔ polisomnografía ↔ CPAP), **infection** (neumonía ↔ tos crónica ↔ post-COVID), and **environmental** (alergias ↔ contaminación CDMX ↔ contingencia ↔ tabaquismo). Every spoke links back to `/agendar-cita/`. Every spoke declares `MedicalCondition` + `MedicalWebPage` schema with `reviewedBy` = the `#physician` node.

6.2 AEO: how to be cited in AI Overviews

Market context: AIO appears in ~50–55% of searches and near 100% for informational medical queries; Gartner projects a 25% traditional-search decline by end-2026 from AI chatbots; Healthline-class publishers report 20–35% session losses in health verticals. Verified 2025–2026 findings on AI citation selection: 55% of citations come from the top 30% of a page, only 38% of cited pages rank in the organic top 10 (down from 76% in earlier studies — meaning well-structured specialist content can be cited without ranking #1), 85% of citations are from content published in the last 2 years, and 44% from the last 12 months.

Six formatting rules that improve citation probability:

1. **Answer-first openings.** First 150 words contain the direct, complete answer. Never open with scene-setting.
2. **Semantic chunking.** Each H2 is a self-contained, independently citable concept opening with a bolded one-sentence answer.
3. **Facts, not prose.** "La espirometría dura 15 minutos y cuesta $500–$1,500 MXN en CDMX" beats "La espirometría es un estudio muy útil para los pacientes".
4. **Citation anchors.** Cite GINA, GOLD, INER, NOM-017-SSA2-2012 inline — AI models prefer sources that cite sources.
5. **Consistent entity naming.** Identical "Dr. William César Lara Vázquez, Neumólogo, Cédula Profesional XXXXXXX" string across site + schema + Doctoralia + GBP + LinkedIn.
6. **Freshness.** `datePublished` + `dateModified` on every page; refresh seasonal content within 48 h of CDMX contingencia events.

Ship `llms.txt` at root. Google officially does not use it (Mueller, July 2025) and adoption is ~10% of sites, but OpenAI/Anthropic docs use it and GPTBot has been observed fetching it — 1–2 hours of work, no downside:

```
# Dr. William César Lara Vázquez — Neumólogo en CDMX
> Consulta privada de neumología en Ciudad de México para adultos.
> Especialidad en asma, EPOC, apnea del sueño, neumonía. Cédula Profesional
XXXXXXX.

## Información clave

- [Polisomnografía](https://alveos.mx/servicios/polisomnografia/)
```

6.3 FAQ pack (answer-first, Spanish, ready for FAQPage schema)

Publish all 30 on `/preguntas-frecuentes/` with FAQPage schema, and inline the 3–5 most relevant Q&As on each condition/procedure page. Representative answers (full 30-question set available to mirror into schema):

- **¿Qué diferencia hay entre neumólogo y neumonólogo?** No hay diferencia: son sinónimos. En México se usa "neumólogo"; "neumonólogo" es común en Argentina, Uruguay y Perú.
- **¿Cuándo debo ir al neumólogo?** Si tienes tos por más de 2–3 semanas, dificultad para respirar, silbidos en el pecho, ronquidos con pausas respiratorias, esputo con sangre o infecciones respiratorias recurrentes.
- **¿Cuánto cuesta una consulta con un neumólogo en CDMX?** Entre $650 y $2,000 MXN. Cadenas económicas como Punto Clínico ofrecen desde $649; hospitales privados (ABC, Ángeles, Médica Sur) van de $1,200 a $1,800.
- **¿Cuánto cuesta una espirometría en CDMX?** $500–$1,523 MXN simple; $1,200–$2,412 MXN con broncodilatador, incluyendo interpretación neumológica.
- **¿El neumólogo acepta seguro médico?** Sí, muchos neumólogos en CDMX atienden GNP, AXA, BBVA, MetLife, Mapfre, Plan Seguro, Banorte, Monterrey y Allianz. Confirma cobertura con tu aseguradora antes de agendar.

- **¿Puedo tener consulta de neumología en línea?** Sí, para seguimiento de asma/EPOC, interpretación de estudios y orientación. Procedimientos como espirometría o auscultación requieren presencial.
- **¿Cómo sé si tengo asma?** Síntomas típicos: tos seca, sibilancias, opresión torácica y falta de aire por la noche, con ejercicio, frío o alérgenos. Se confirma con espirometría con broncodilatador.
- **¿Qué es la EPOC y cómo se diagnostica?** Enfermedad pulmonar progresiva ligada al tabaquismo; incluye enfisema y bronquitis crónica. Se confirma con espirometría: FEV1/FVC <0.70 post-broncodilatador.
- **¿Cómo saber si tengo apnea del sueño?** Ronquidos fuertes, pausas respiratorias observadas, despertares con ahogo, somnolencia diurna, dolor de cabeza matutino. Se confirma con polisomnografía.
- **¿Puede la contaminación de CDMX causar enfermedades respiratorias?** Sí. PM2.5, PM10 y ozono se asocian con aumento de asma, infecciones respiratorias, agravamiento de EPOC y mayor riesgo cardiovascular.

6.4 Content calendar: the contingencia ambiental moat

CDMX-specific news-jacking is the fastest organic win because no individual neumólogo particular owns this recurring, high-volume query. Publish an evergreen "Contingencia ambiental en CDMX 2026: cómo proteger tus pulmones hoy" and update it within 24–48 h each time the CAMe activates. Parallel seasonal calendar: January-February = influenza/frío guides; March-June = ozono/contingencia + alergias primaverales; May 31 = Día Mundial sin Tabaco; September 25 = Día Mundial del Pulmón; Q4 = vacunación respiratoria adulto. Evergreen pillars (refresh every 12 months): asma en adultos, EPOC, apnea del sueño, neumonía, espirometría CDMX precio, teleconsulta neumólogo México, seguros aceptados.

6.5 Competitive gaps to exploit

Six content angles where every CDMX neumólogo competitor is weak: **(a)** insurance-acceptance pages ("neumólogo que acepta GNP") — almost nobody has them, very high CVR; **(b)** real-time contingencia ambiental content — hospital chains and news sites cover it, no individual doctor owns it; **(c)** transparent pricing ranges — Punto Clínico wins with $649 and hospitals hide prices; **(d)** teleconsulta neumológica; **(e)** post-COVID pulmonar 2026 guide; **(f)** FAQ with proper FAQPage schema, which healthcare can still earn rich snippets on.

90-day execution checklist

Weeks 1–3 (blockers and foundation): file Aviso de Funcionamiento + Aviso de Publicidad

COFEPRIS; publish `/aviso-de-privacidad/`, `/terminos-y-condiciones/`, `/aviso-legal-cofepris/`; convert SPA to ~12 static HTML files; ship the `<head>` + `@graph` JSON-LD + GSAP progressive-enhancement patterns above; fix any `opacity:0` hero; stand up Cloudflare-in-front of GitHub Pages; claim and fully populate Google Business Profile (primary category **Neumólogo**); claim Doctoralia and Top Doctors profiles with identical NAP; install GA4, Search Console, Bing Webmaster, GTM.

Weeks 4–8 (content + AEO): publish 5 condition pillars + 3 procedure pages + `/seguros/` + `/preguntas-frecuentes/` (all 30 Q&As, FAQPage schema); ship `llms.txt`; submit `sitemap.xml`; deploy the trust-signals footer on every page; add `reviewedBy` bylines to every clinical article; begin 2 GBP posts/week and the contingencia ambiental evergreen article.

Weeks 6–12 (paid launch + authority, parallel): launch Google Ads — brand defense + neumólogo CDMX core + apnea del sueño + EPOC/asma condition groups + call-only urgencia campaign + remarketing; enable Enhanced Conversions; target Quality Score ⩾ 7 across the keyword basket; request reviews from first 50 patients via printed QR + 24 h follow-up WhatsApp (never incentivized, per Google ToS + COFEPRIS); pitch 3 guest articles to Saludiario/Infobae Salud; apply to insurer cuadros médicos (GNP, AXA, MetLife, Sofía).

Success metrics at day 90: Rich Results Test green on all pages; LCP < 2.5 s / INP < 200 ms / CLS < 0.1 on mobile; 50+ Google reviews at ⩾4.7★; 15–40 qualified calls/form fills per month from paid; early organic impressions on "neumólogo Benito Juárez" and condition long-tail; FAQ snippets appearing for 2–3 Q&As; brand SERP dominated (paid + organic + GBP local pack all showing Alveos for "Dr. William Lara Vázquez").

Conclusions and key takeaways

The single biggest leverage point is structural, not cosmetic. Converting the SPA into a multi-page static site — same tech stack, same GSAP animations — unlocks all six research areas simultaneously: proper keyword targeting per URL, clean sitelinks for Google Ads, indexable condition hubs, and crawlable FAQ schemas. Every other recommendation compounds on that foundation. **Google's medical policy is friendlier to Mexican physicians than it looks**: no LegitScript certification required for an individual neumólogo with a COFEPRIS Aviso; FAQPage rich results are still available to healthcare sites when most industries have lost them; and the `Physician` schema type with `hasCredential` + `alumniOf` maps cleanly to Mexican regulatory requirements (cédula SEP, Consejo Nacional de Neumología). **GSAP is compatible with top-tier Core Web Vitals if you obey one rule: never animate the LCP element from `opacity: 0`.** Start at 0.01, animate siblings, or use transforms only — that single change has moved documented case studies from 5.3 s to 2.4 s LCP. **The fastest organic patient-acquisition moat in 2026 is the contingencia ambiental + neumólogo CDMX intersection** — no individual doctor owns it, the query recurs multiple times per year in CDMX, and an evergreen page updated within 48 h of each CAMe activation compounds E-E-A-T signals while generating press-friendly news-jacking opportunities. **Paid and organic are not rivals but multipliers**: for a new site that cannot rank #1

organically for 6–12 months, Ads fill the gap at MX$150–400 CPA, and simultaneous SERP presence (ad + local pack + organic) remains the highest-converting configuration for a solo physician's brand.
